

LT8490

High Efficiency MPPT Battery Charger Controller

DESCRIPTION

Demonstration circuit 2069A features **LT[®]8490**, a high performance buck-boost converter that implements an MPPT function and flexible charging profiles suitable for most battery types such as flooded and sealed lead acid batteries and Lithium-Ion batteries, and can operate from input voltages above, below or equal to the battery voltage.

The demo board is configured for a 17V to 54V input voltage range and the power source can be a solar panel with 36 to 72 cells (up to 200W) or a DC voltage source. Two input connectors are provided. An LTC4359 ideal diode controller protects the DC power supply output from being back fed from the solar panel. This allows, for example, that a 24VDC supply is plugged in while a solar panel with higher voltage is being used to power the circuit.

On-chip logic provides automatic true power point tracking for solar powered applications. The MPPT function not only continuously tracks the maximum power point, it is able to select the correct maximum on the power curve to increase power harvested from the panel during partial shade conditions, when multiple peaks occur on the power curve. During periods of low light, a low power mode allows the charger to deliver a small charge current even if there is not enough light for the MPPT function to operate.

The demo board output is set up for charging a 12V SLA battery with up to 16.6A charge current. Two charge

configuration headers are provided so the user can select different charge algorithms.

There are two onboard LEDs that display information on the charge stage, and they will blink fault messages if the charger shuts down because of a fault. A simple serial interface also sends out status bytes that can be interpreted by external circuitry.

An RJ25 modular jack can be used to connect an external NTC temperature sensor mounted at the battery. This allows temperature compensation of the charge voltage, which is important for lead acid batteries. The same connector can be used for remote sensing of battery voltage, to compensate for voltage drops in long battery cables.

The LT8490 data sheet gives a complete description of the device, operation and application information. The data sheet must be read in conjunction with this demo manual for DC2069A. The LT8490EUKJ is assembled in a 64-lead (7mm × 11mm) plastic QFN package with a thermal pad underneath the chip. Proper board layout is essential for maximum thermal performance.

Design files for this circuit board are available at <http://www.linear.com/demo/DC2069A>

PERFORMANCE SUMMARY

Figure 1. Efficiency as a Function of Charge Current. $V_{IN} = 28V$, $V_{OUT} = 14.2V$

Figure 2. Input and Output Currents as a Function of Input Voltage. $V_{OUT} = 13.6V$

QUICK START PROCEDURE

1. Connect a 12V lead acid battery to the V_{BAT} connector, making sure that the polarity is correct. A suitable battery size is a 150Ah 12V deep cycle sealed lead acid battery, but also smaller 12V lead acid batteries can be used for testing the charging functions. Use a short battery cable that is rated for 15A or higher.
2. Connect the solar panel to the PANEL IN connector, making sure that the polarity is correct. A suitable panel is a 250W 60 cell solar panel, but any panel with 36 to 72 cells (54V maximum open circuit voltage) can be used.
3. Point the solar panel towards sunlight and monitor the MPPT charger function under different conditions, using ampere meters and voltmeters and other test equipment as needed.
4. The charger will also work with a DC power supply connected to the DC IN connector. Disconnect the solar panel before turning on the DC supply. (The charger can operate from both power sources simultaneously. However, the MPPT function will be disabled while there is DC voltage on the DC IN input, so the solar panel may not be operating at its maximum power point if the charger is also powered from the DC IN connector.) A suitable supply is a 24Vdc supply that can deliver at least 12A, but any DC power supply that has an output voltage in the range 10V to 54V and is able to deliver 250W power or 12A current can be used for evaluation.
5. Note that the charger will not start unless the output voltage is above 4.5V. This means that if the battery is replaced by an active programmable load during evaluation, a small power supply needs to be connected across the load to start the charger. A small 9V battery with a diode in series works fine.
6. Read the LT8490 data sheet for more detail on the function of the circuit and how to change the charge algorithm.

DEMO MANUAL DC2069A

PARTS LIST

ITEM	QTY	REFERENCE	PART DESCRIPTION	MANUFACTURER/PART NUMBER
Required Circuit Components				
1	1	C12	CAP., X7R, 1nF, 16V, 20%, 0603	AVX, 0603YC102MAT4A

DEMO MANUAL DC2069A

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
