# PiGrrl Zero Custom Gamepad PCB

PRODUCT ID: 2934

Description

This is the custom **Gamepad PCB for the PiGRRL Zero Parts Kit!**

We've dramatically cut the build time in half of the PiGRRL Zero pack by making this custom gamepad PCB. Just solder in 6mm tactile switch buttons and do a some wiring from the header pins on the PCB.

Comes with just a single PCB and you'll need 2 to finish the project! Best for people who already have the rest of the parts, or are doing a custom build. Check out the PiGrrl Zero tutorial guide for schematics, details, files, and more.
