

ARM-JTAG-COOCOX

ARM debugger with JTAG and SWD interfaces, based on CoLinkEX

ARM-JTAG-COOCOX is an ARM debugger based on CoLinkEX design. It is meant to work out-of-the-box with the free CooCox IDE. It can also be used with Keil MDK and IAR EW IDEs (driver for IAR still not perfect) via external plugins. Its affordable price and the ability to debug via both SWD (Serial Wire Debug) and JTAG interfaces are the key points.

FEATURES

- Open hardware - you have access to board design and board schematic
- Supports Cortex-M0, Cortex-M3 and Cortex-M4 devices
- Supports SWD interface
- Supports JTAG interface
- Can be used with the free CoFlash and CoIDE, or the commercial Keil MDK and IAR EW (driver for IAR still not perfect)
