

PROTECTION PRODUCTS

Description

The LC05-6 has been specifically designed to protect sensitive components which are connected to high-speed telecommunications lines from over voltages caused by lightning, electrostatic discharge (ESD), and electrical fast transients (EFT).

The device is in a JEDEC SO-16 NB package. It is designed to provide metallic surge protection for two tip & ring line pairs. The low capacitance topology means signal integrity is preserved on high-speed lines. The high surge capability (2000W, $t_p=8/20\mu s$) makes the LC05-6 suitable for telecommunications systems operating in harsh transient environments.

The LC05-6 is designed to meet the lightning surge requirements of Bellcore GR-1089 (intra-building), ITU K.20, and IEC 61000-4-5. The features of the LC05-6 are ideal for protecting T1/E1 transceivers in WAN applications.

Features

- ◆ Transient protection for high-speed data lines to Bellcore GR 1089 $I_{pp}=100A$ (2/10 μs)
ITU K.20 $I_{pp}=40A$ (5/310 μs)
IEC 61000-4-2 (ESD) >25kV
IEC 61000-4-4 (EFT) 40A (5/50ns)
IEC 61000-4-5 (Lightning) 100A (8/20 μs)
- ◆ Protects two tip and ring line pairs
- ◆ Low capacitance for high-speed interfaces
- ◆ High surge capability
- ◆ Low clamping voltage
- ◆ Solid-state silicon avalanche technology

Mechanical Characteristics

- ◆ JEDEC SO-16 package
- ◆ Molding compound flammability rating: UL 94V-0
- ◆ Marking : Part number, date code, logo
- ◆ Packaging : Tube or Tape and Reel per EIA 481

Applications

- ◆ T1/E1 Line Cards
- ◆ Base Stations
- ◆ WAN Equipment
- ◆ CSU/DSU
- ◆ Multiplexers
- ◆ Routers
- ◆ ISP Equipment
- ◆ Customer Premise Equipment

Applications Information

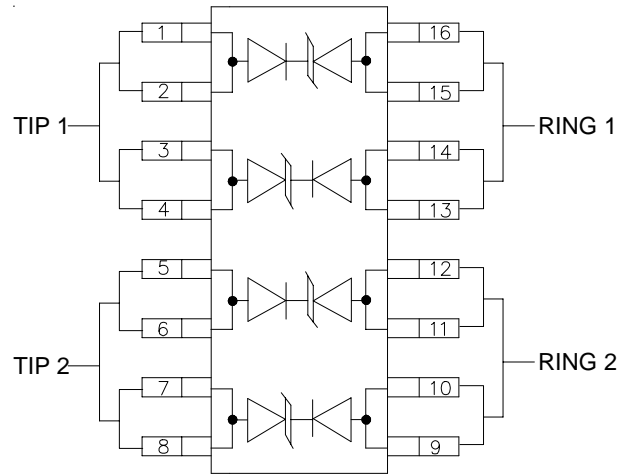

Device Connection Options for Protection of Two High-Speed Line Pairs

The LC05-6 is designed to protect four high-speed data lines (two differential pairs) from transient over-voltages which result from lightning and ESD. Protection of two line pairs is achieved by connecting the device as follows: Pins 1-4 are connected to line 1 of the first pair (i.e. Tip 1) and pins 13-16 are connected to line 2 of the first pair (i.e. Ring 1). Pins 5-8 are connected to line 1 of the second pair (i.e. Tip 2) and pins 9-12 are connected to line 2 of the second pair (i.e. Ring 2). All pins should be connected for best results. Minimize parasitic inductance in the protection circuit path by keeping the trace length between the protected line and the LC05-6 as short as possible.

T1/E1 Linecard Protection

A typical T1/E1 linecard protection circuit is shown in Figure 2. The LC05-6 is connected between Tip & Ring on the transmit and receive line pairs. It provides protection to metallic (line-to-line) lightning and ESD surges. It is designed to meet the intra-building requirements of Bellcore GR-1089. This design takes advantage of the isolation of the transformer to suppress common mode surges. To complete the protection circuit, the SRDA05-4 (or SRDA3.3-4 for 3.3V supplies) is employed as the IC side protection element. This device helps prevent the transceiver from latching up by providing fine clamping of transients that are coupled through the transformer.
